

EduCanNURS

Better cancer care with skill and confidence

Developing competencies to support encounters with people affected by cancer

Caring for people affected by cancer is not limited on specialist units, therefore all nurses need to have the basic competences related to prevention of cancer, early detection, diagnosis, treatment principles and supportive care with communication abilities to encountering people with cancer.

Project objectives are to

- develop the Cancer Care Continuum approach on undergraduate nursing curricula
- create implementation model with a pilot module
- test and evaluate the module
- create a toolkit for nursing teachers and recommendation on further development of undergraduate nursing education on cancer.

educannurs.turkuamk.fi

Key actions in the project:

Need assesment

- Curriculum analysis in participating universities
- Mapping of existing content of cancer care continuum

Co-design of the cancer care continuum approach

- Creating a digital toolkit and roadmap for nursing educators
- Producing content and resources with links to evidence-based materials

Pilot and program evaluation

- Creating a protocol for the pilot
- Pilot testing

Communication and dissemination

- Online, publications and events
